

Time for an Upgrade?

Millennium III

- Have you outgrown your current system?*
- Are you missing critical functionality?*
- Are you paying a programmer to keep an antiquated system running?*
- Does your system keep losing critical data?*
- Does it crash on a regular basis?*
- Do you have multiple systems for different parts of your company?*
- Do you spend more time searching for data than running the company?*
- Is your software vendor out of business, or absorbed by someone else?*
- Do they provide the support you need?*

A successful, growing business demands business software that expedites growth. Even the best companies can't face tomorrow's challenges with yesterday's technology. If you're still using an off-the-shelf, shrink-wrapped package that's not providing the functionality you need, or one of those accounting-only packages that tries to do some inventory functions, isn't it time to step up to something better?

Discover the M3 Difference

Rover Data's Millennium III system provides complete integration among all operations, for optimum visibility and measurement. The system's workflow capability speeds data retrieval to help busy executives stay on top of their businesses.

Since downtime costs money, Rover Data Systems makes the transition to M3 efficiency as quick and stress-free as possible. Our ability to go above and beyond what is considered an industry-standard implementation means clients can be secure in the confidence they're getting the most from their ERP software.

"The impact of Millennium III was immediate. Planning and production runs that took 2-3 days were now taking 20-30 minutes, plus the company was running with more current data and able to make better decisions."

Stacoswitch,
Millennium III customer
