

# Finance and Accounting

Millennium III

The M3 System includes complete, easy to learn and use applications for financial functions such as Accounts Receivable, Accounts Payable and General Ledger. The M3 Financial Applications are designed to let you easily modify them to fit your business processes. For example, the Accounting department has complete ability to define:

- Account numbers
- Aging periods
- Fiscal periods
- Month-end close procedures

This allows M3 users the ability to run financial operations as they desire instead of conforming to new standards, making workers more efficient and cutting training and implementation times.

M3 is designed to allow you to perform normal operations while completing period-end processing. The rest of the company can operate normally, and efficiently, and can keep entering and fulfilling orders while the books are being closed.

Finally, since all M3 applications reside within the same system, the Sales, Purchasing, Inventory, Production and Service applications can be set to automatically generate financial application records. This improves efficiency and rids you of the costs of re-keying of data or data entry errors.

- Accounts Payable
- Accounts Receivable
- General Ledger

## **Accounts Payable**

The Accounts Payable application gives you maximum control of the payable process. You define aging periods and whether items are paid individually or by due date. Integration with the Purchasing application allows automatic vouchering of received items, reducing data entry time and costly errors.

- Detail or summary aging
- Multiple cash disbursement accounts
- Accrued entries created from receiving process
- Reports on variances between purchase order and invoice costs
- The ability to manage recurring expenses
- The ability to manage printing of system checks or entry of manual checks
- The reporting and printing of 1099s
- Use continuous form, laser pre-printed or blank-stock check forms

## **Accounts Receivable**

The Accounts Receivable application gives you the ability to enter and maintain customer invoices, and to process payments against those invoices. As with all M3 applications the user defines the aging periods, and how accounts should be handled.
